題目說明：

Write a program that inputs an integer that represents a length of time in seconds. The program should then output the number of hours, minutes, and seconds that corresponds to that number of seconds.

Ex. If the user inputs 50391 total seconds, the program should output 13 hours, 59 minutes, and 51 seconds.

輸入說明：

Inputs the total seconds.

Your code must support multiple test cases.

輸出說明：

Output the number of hours, minutes, and seconds that corresponds to that number of seconds.

I/O 範例：

	Sample Input	Sample Output
第一組測資與輸出	50391	13 hours 59 minutes and 51 seconds
第二組	489123456786	135867626 hours 53 minutes and 6 seconds
第三組	569035139015	158065316 hours 23 minutes and 35 seconds
